- extension function on all types
- `this` is `account` - lambda with receiver
- returns the result of evaluating the lambda
- use cases:
  - ☑ object configuration and computing the result
  - ☑ introduce an expression as this in the local scope

```
val updatedAccount: Account = account.run {
    Account(
        iban = iban,
        product = product,
        currency = currency,
        balance = balance + 300.0
    )
}
```

Scope functions

run

```
val updatedAccount: Account = account.run {
    Account(
        iban = iban,
        product = product,
        currency = currency,
        balance = balance + 300.0
    )
}
```
